| M365 | Enterprise-Grade Security and CI/CD
Delhi, India

Summary

Highly skilled and results-driven Azure and Agentic AI engineer with deep experience designing, deploying, and securing cloud-native solutions for enterprise environments. I specialize in building Python-based agentic AI applications, managing Microsoft's internal security frameworks, and orchestrating Azure DevOps pipelines for seamless CI/CD and governance.

With a proven track record across Infosys and i2k2 Networks, I've led cloud engineering teams to deliver highly customized, cost-effective, and secure solutions using the full Azure ecosystem—including PaaS, IaaS, containers, identity, and migration services. My work spans cloud architecture, DNS and infrastructure security, Generative AI integration, and automation strategies that drive performance and reliability.

I thrive in dynamic environments where innovation meets precision. Whether architecting secure PaaS platforms or enhancing operational workflows with Gen AI, I'm passionate about solving complex challenges and delivering scalable, future-ready solutions.

Let's connect if you're exploring cloud transformation, AI-driven automation, or enterprise-grade security in Azure.

Experience

Infosys

Associate Consultant

October 2024 - Present (1 year 2 months)

Noida, Uttar Pradesh, India

I lead the development and deployment of Python-based agentic AI applications within Microsoft's internal ecosystem, integrating cutting-edge AI tools with secure Azure services. My responsibilities span across:
Architecting and managing highly secure PaaS environments on Azure

Implementing Microsoft's internal security best practices across cloud infrastructure

Orchestrating Azure DevOps pipelines for seamless CI/CD and governance

Designing and maintaining robust cloud networks, DNS configurations, and database security

Collaborating with cross-functional teams to ensure compliance, scalability, and operational excellence

Driving innovation in agentic AI workflows to enhance automation and decision-making

This role allows me to work at the intersection of AI, cloud architecture, and enterprise-grade security—delivering resilient, intelligent solutions for Microsoft's internal initiatives

i2k2 Networks

Solutions Engineer

September 2023 - October 2024 (1 year 2 months)

Delhi, India

Led the Azure engineering team to deliver highly customized, secure, and cost-effective cloud solutions tailored to diverse client requirements. I was responsible for architecting end-to-end cloud environments that prioritized performance, scalability, and compliance.

Designing and deploying Azure architectures using PaaS, IaaS, containers, and hybrid models

Implementing enterprise-grade security, identity management, and high availability strategies

Driving cloud migration initiatives with minimal downtime and maximum reliability

Managing DNS, networking, and infrastructure security across multi-tenant environments

Leading DevOps practices with Azure DevOps pipelines for CI/CD, governance, and automation

Integrating Generative AI tools and services to enhance client solutions and operational workflows

Collaborating with clients to translate business goals into technical blueprints

Optimizing cloud costs through strategic planning, resource scaling, and performance tuning

This role gave me hands-on experience across the full Azure ecosystem, blending Gen AI innovation with robust DevOps and security practices to deliver transformative cloud solutions.

Team Computers

Cloud Engineer

January 2022 - July 2023 (1 year 7 months)

Delhi, India

Designed and deployed Azure cloud infrastructure solutions for clients, aligning with their business requirements and best practices.

Configured Azure networking components such as Virtual Networks, Subnets, Load Balancers, and Traffic Manager to ensure secure and reliable connectivity for applications.

Implemented Azure Storage solutions for data persistence and backup, utilizing Blob storage, File shares, and Queue storage as per application requirements.

Implemented robust security measures in Azure, including Network Security Groups, Azure Active Directory integration, and data encryption.

Optimized Azure environments for performance and cost efficiency by implementing resource scaling, load balancing, and auto-scaling mechanisms.

Managed Azure databases, including SQL Database and Cosmos DB, ensuring high availability, performance, and data integrity.

Stefanini Brasil

System Administrator

June 2021 - November 2021 (6 months)

Noida, Uttar Pradesh, India

Provided technical support to end users, troubleshooting and resolving hardware, software, and network issues to maintain high levels of user satisfaction.

Managed Active Directory, group policies, and user accounts to ensure proper access and permissions.

Conducted system maintenance, patching, and updates to keep systems up-to-date and secure.

Assisted in planning and implementing IT projects, such as hardware refreshes and technology migrations.

Education

CHANDIGARH UNIVERSITY

Master of Computer Applications - MCA, Computer Science · (July 2023 - July 2025)

Veer Bahadur Singh Purvanchal University, Jaunpur
Bachelor of Computer Applications-BCA, Information
Technology · (2016 - 2019)
